	Lab 4: Advanced Prompt Engineering – Zero-shot, One-shot, and Few-shot Techniques	
	Lab Objectives:	
	 To explore and apply different levels of prompt examples in AI-assisted code generation. 	
	 To understand how zero-shot, one-shot, and few-shot prompting affect AI output quality. 	
	 To evaluate the impact of context richness and example quantity on AI performance. To build awareness of prompt strategy effectiveness for different problem types. 	
	Lab Outcomes (LOs): After completing this lab, students will be able to:	
	 Use zero-shot prompting to instruct AI with minimal context. Use one-shot prompting with a single example to guide AI code generation. Apply few-shot prompting using multiple examples to improve AI responses. Compare AI outputs across the three prompting strategies. 	
1	Task Description#1 ■ Zero-shot: Prompt AI to write a function that checks whether a given year is a leap year. Expected Output#1 ■ AI-generated function with no examples provided	Week2 - Wednesday
	Task Description#2 One-shot: Give one input-output example to guide AI in writing a function that	
	converts centimeters to inches. Expected Output#2 • Function with correct conversion logic	
	Task Description#3 • Few-shot: Provide 2–3 examples to generate a function that formats full names as "Last, First".	
	Expected Output#3 • Well-structured function respecting the examples	
	Task Description#4 • Compare zero-shot and few-shot prompts for writing a function that counts the	
	number of vowels in a string. Expected Output#4	
	Functional output and comparative reflection	
	Task Description#5	
	Use few-shot prompting to generate a function that reads a .txt file and returns the number of lines. Fig. 1.10. 1.10.	
	Expected Output#5 ■ Working file-processing function with AI-guided logic	

Note: Report should be submitted a word document for all tasks in a single document with prompts, comments & code explanation, and output and if required, screenshots					
Evaluation Criteria: Criteria	Max Marks

```

Task Description#2

• One-shot: Give one input-output example to guide AI in writing a function that converts centimeters to inches.

Expected Output#2

• Function with correct conversion logic

Prompt:

Write a function to convert centimeters to inches.

Example:10.0 centimeters is equal to 3.912345 inches. read input from the user.

```
task2copilot.py > ...

def cm_to_inches(cm):
    return cm / 2.54

cm = float(input("Enter length in centimeters: "))
inches = cm_to_inches(cm)
print(f"(cm) centimeters is equal to {inches} inches.")

```

Task Description#3

• Few-shot: Provide 2–3 examples to generate a function that formats full names as "Last, First".

Expected Output#3

• Well-structured function respecting the examples

Prompt:

Write a python function that generates formats full names as "last, first".

Example: peter parker =parker peter.

Harry potter=Potter Harry

Read full name from the user.

Code:

```
  task3copilot.py > ...

     def format full name(full name):
          """Return the full name formatted as 'last First' with proper capitalization."""
       parts = full_name.strip().split()
         if len(parts) < 2:</pre>
           return "Invalid input. Please enter both first and last name."
         first = parts[0].capitalize()
         last = parts[-1].capitalize()
         return f"{last} {first}
     if __name__ == "__main__":
        full_name = input("Enter full name (first last): ")

Task Description#1

• Zero-shot: Prompt AI to write a function that checks whether a given year is a leap year.

Expected Output#1

• AI-generated function with no examples provided

Prompt:

write code to check whether given year is leap or not.

```
check if a given year is a leap year.

Leap year rules:
1. If a year is divisible by 4, it's a leap year
2. However, if it's also divisible by 100, it's NOT a leap year
3. Unless it's also divisible by 400, then it Is a leap year

Args:
year (int): The year to check

Meturns:
bool: True if it's a leap year, false otherwise

if year % 400 = 0:
    if year % 400 = 0:
        return True
else:
    return True
else:
    return True
else:
    return True
else:
    return True
```

```
